

*Protect what is important to you!*

# ***Lenoir water barriers***

## **Simple, fast and secure water stops**

Sand bags are a thing of the past! Swiss Lenoir water barriers meet all the requirements of water barriers for use in emergency situations. They are available in different sizes, are incredibly easy to set up, and hold water quickly and securely. Lenoir water barriers have already proven themselves in numerous emergency situations!

*Optional integrated opening for controlled water draining, for use in the case of oil and chemical spills.*

***For towns, fire fighters, the army,  
businesses and home owners***

**Flood protection**  
*Protects buildings and landscapes*

**Pipeline & hydrant damage**  
*Extremely quick to set up in emergency situations*

**Water reservoir in case of fire**  
*Water damming for use in remote forest or building fires*

**Water-calming**  
*Controlled water draining for pollution*

## How does the Lenoir intelligent water barrier system work?

Once the portable Lenoir water barrier, which can be carried by just two people, is rolled out and put in to position, the force of the water does the rest of the work! The Lenoir water barrier fills itself to up to one metre in height, depending on the model. An optional, built-in opening at the bottom of the barrier allows controlled water draining. This allows polluted water to be siphoned off easily.

- *One of the world's best-selling, mobile, location-independent water barriers!*
- *Connectible - for any length of dam*
- *Rapid assembly and removal*
- *Can be stored in small spaces*

## Lenoir water barriers are also suitable for use on roads

The use of heavy sand bags is a thing of the past! The new Swiss Lenoir water barriers are able to dam or redirect flowing water within seconds. Polluted water can also be siphoned off easily. Lenoir water barriers can be set up in no time, under even the most difficult of conditions, and on almost all surfaces, such as roads and river beds. The rapid assembly of Lenoir water barriers considerably reduces the extent of damages caused by flooding or by emergency situations, such as pipeline and hydrant damage!

*Lenoir water barriers are reusable, and can be transported and stored in the smallest of spaces.*

*All Lenoir water barriers are connectible and can therefore be extended to any length.*
